Software Engineer | Frontend

HTML

CSS

Javascript

Bootstrap

React

Projects

Website Redesign

Developed a website from scratch with **HTML**, **CSS**, and **Javascript** with a strong application of flex box to create a responsive mobile to desktop design. Created functions to navigate and animate the page.

Working on:

- A Javascript quiz game (*using objects, parameters, arrays & element targeting*)
- An inventory web application (*using React*)
- An Intro-Component with signup form (*using HTML, CSS & Javascript*)

Experience

Although my project section seems empty right now, rest assured that I am working hard on adding more projects. I don't intend on hosting uncompleted projects on my portfolio. I am in the process as we speak of learning Bootstrap, Tailwind CSS and React so that I have the skillset to develop responsive and more importantly scalable code.

Right now I can say with confidence that I can manipulate elements to be placed anywhere on a page with flex box and grid. I like to develop my pages one section at a time, making them mobile and desktop ready before moving onto the next section. I believe I am good at creating well readable and documented code in HTML, CSS and Javascript. I'd say my Javascript experience is getting better by using parameters, arrays and objects more as I go along. I'm excited to understand React more so that I'm able to create reusable components in my work.

I take part in coding challenges daily to push my development skills to new heights. It's my goal to be 1% better in everything that I am every single day. 💪

Education

Game Development | BA Honors | 2020

Sheffield Hallam University, UK

Frontend Web Development | Cert | 2023

University of Arkansas

Self-Development ie. Projects

Learning via YouTube, Udemy, Scrimba
